## Profile

I developed a solid foundation in HTML, CSS, and JavaScript, as well as experience working with React. I have also completed several personal projects, which demonstrate my ability to create high-quality, visually appealing interfaces. I am a quick learner with a strong work ethic and am excited to apply my skills and knowledge to real-world projects.

## Skills

### Programming Languages

JavaScript (ES6)  
HTML  
CSS/Sass  
Python

### Libraries & Frameworks

React  
Redux  
TailwindCSS  
Astro

### Tools & Platforms

Git  
Wordpress  
Trello

## Projects

### Rick and Morty web app

This web application is built in React using modern front-end libraries and tools such as React Router, React Query, Axios and TailwindCSS. The application utilizes the Rick and Morty API to display information about characters, episodes, and locations from the popular TV show, Rick and Morty.

- The application uses React Router to handle client-side routing and provide a seamless user experience.
- The use of React Query enables the application to handle server-side data fetching and caching, resulting in faster load times and improved performance.
- TailwindCSS is used to provide a consistent and modern UI design, with responsive layouts that adapt to different screen sizes and devices.

### Ecommerce Product Page

This web application is a product page for an ecommerce store, built in React and TailwindCSS. The page displays product details, including images, descriptions and a cart section.

- The application is built in React, allowing for dynamic updates to the page without the need for a full page refresh.
- TailwindCSS is used to provide a consistent and modern UI design, with responsive layouts that adapt to different screen sizes and devices.

### Portfolio Page

Built in React and TailwindCSS. The page displays my projects details, including images, descriptions and a techs section.

- The application is built in React, allowing for dynamic updates to the page without the need for a full page refresh.
- DaisyUI is used to extend TailwindCSS and provide additional UI components and utilities, enhancing the design and functionality of the page.
